

Landsat 7 Processing System (LPS)

Critical Design Review

November 17, 1995

Agenda

- | | |
|-----------------------------|-------------------------|
| • Introduction | J. Henegar |
| • Design Overview | R. Schweiss
T. Aslam |
| • LPS Hardware Architecture | C. Brambora |
| • LPS Operational Scenarios | R. Schweiss |
| • SWCI Detailed Design | J. Hosler
D. Crehan |
| • System Testing | J. Henegar |
| • Acceptance Testing | EDC |
| • Facilities | EDC |
| • Conclusion | J. Henegar |

Agenda

- **Introduction**

J. Henegar

**Purpose and Scope
Documentation
SDR/SSR Followup
Context Diagram**

- **Design Overview**

**R. Schweiss
T. Aslam**

- **LPS Hardware Architecture**

C. Brambora

- **LPS Operational Scenarios**

R. Schweiss

- **SWCI Detailed Design**

**J. Hosler
D. Crehan**

- **System Testing**

J. Henegar

- **Acceptance Testing**

EDC

- **Facilities**

EDC

- **Conclusion**

J. Henegar

- **Ludie Kidd/510** **Chair**
- **Jim Andary/430**
- **Bill Potter/511**
- **Jim Irons/923**
- **Armen Caroglanian/531**
- **Ted Ackerson/505**
- **John Boyd/EDC**
- **Mike Mignogno/NOAA**
- **Jim Ellickson/NOAA**
- **Madeline Butler/501**
- **Tom Bialas/514**

Purpose and Scope

- **Purpose of CDR**
 - Present synopsis of LPS Detailed Design Specification and related design material
- **Scope of LPS Detailed Design**
 - Detailed design encompasses:
 - » Defining detailed design for software and hardware CI's
 - » Refining detailed inter-subsystem interfaces, refining external interfaces
 - » Defining a detailed design for the operator-system interface
 - » Defining a detailed design for the database
 - » Refining operations scenarios
 - » Performing further studies and prototypes to guide design
 - » Defining final test plans
 - » Documenting the above in specifications, ICD's, plans, etc

- **Accompanying Documentation**
 - **LPS Detailed Design Specification**
 - **LPS Interface Definition Document**
 - **LPS-IAS Interface Control Documentation**
 - **LPS System Integration and Test Plan**
 - **LPS Build Implementation Plan**
 - **LPS User's Guide (Preliminary)**
 - **LPS Output Files Data Format Control Book**

- **All documentation is available on-line from the Landsat Processing System server. Instructions for access are included in the back of the package**

- **Please submit RIDS to: Phil Province (bldg 23, RM C429, 286-7731) no later than December 8, 1995**

- **23 RIDs and 5 Action Items received as result of the LPS SDR/SSR conducted March, 1995**
 - **All RIDs were responded to and concurred by the originator. Appropriate documentation was updated as necessary.**

Major Catagories of RIDS

- **Inconsistencies in System Design Spec and Software Requirements Spec.**
 - Inconsistencies were corrected in signature version of SDS and SRS
- **Failover and use of Integration and Test Recorders**
 - Approaches to use of the Integration and Test Recorders were provided
- **Metadata Contents updates**
 - Appropriate fields were added to the metadata contents and F&PS was updated accordingly
- **Data Quality Assurance and Trending Analysis**
 - Working with Project Science Office to provide impacts to the Project
- **LGS Interface Control Document Comments**
 - Items were incorporated into the signature version of the ICD

Action Item Summary

- **AI 03-09-95-01 Confirm contact period duration**
 - 14 minutes is the maximum contact duration for EDC 0 Degree Acquisition Circle
- **AI 03-09-95-02 Use of hardware for some LPS functions**
 - Trade studies were performed and presented as part of the LPS System Design Review showing that a predominantly software approach was advantageous, cost effective, and feasible
- **AI 03-09-95-03 Identify alternative RAID hardware vendors**
 - Alternatives are available in industry and identified in Action Item response

Action Item Summary

- **AI 03-09-95-04 Obtain written statements for vendor support and demonstrate that s/w is portable**
 - Written statements are attached to action item response.
 - Software portability is not a requirement, however, LPS has adopted proven approach for minimizing portability problems. LPS will be POSIX compliant were ever possible and isolate and clearly document any non-POSIX implementations. This has been proven effective by Pacor II portability exercises.
 - Working with SGI to obtain continued support for the device drivers for data capture

- **AI 03-09-95-05 Use of Spacecraft I&T Recorders**
 - Covered under RID Response

Functional Requirements

- Receive and record raw Landsat 7 wideband data from the LGS for 4 wideband data inputs simultaneously on a contact basis
- Perform CCSDS Grade 3 Service on all received wideband data
- Perform BCH Error Detection and Correction on all wideband data
- Generate Level 0R data files on a subinterval basis
- Generate Browse Data files on a scene basis
- Generate Metadata data files on a subinterval basis
- Provide return link quality and accounting as part of metadata
- Perform Automated Cloud Cover Assessment
- Identify WRS scene boundaries
- Coordinate the transfer of all Level 0R related data files to the Land Processes (LP DAAC)

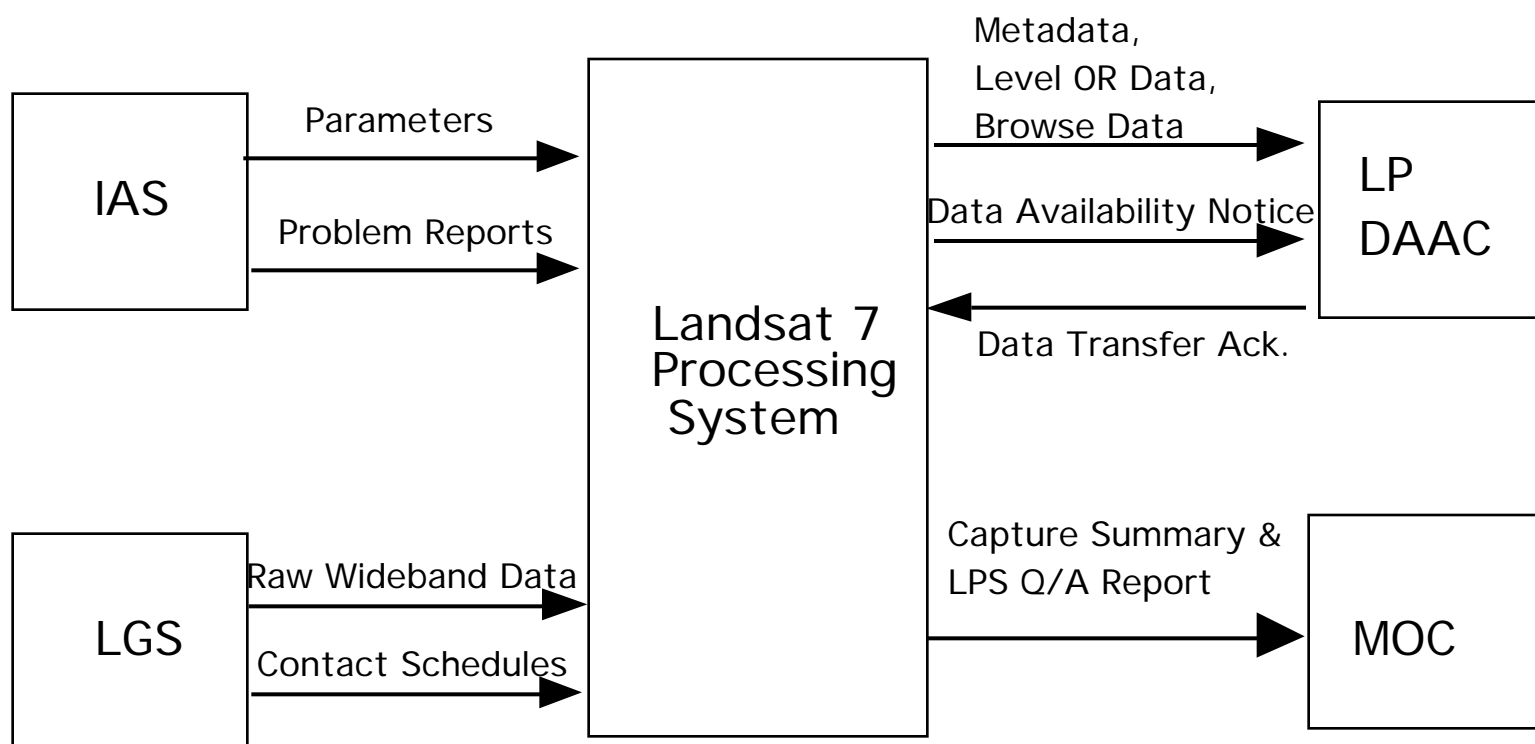

Performance Requirements

- Receive and record the raw wideband data at 75Mbps for each input data stream
- Process the equivalent of 250 ETM+ scenes per day
- Process and notify the LP DAAC of data availability within 16 hours of receipt of data
- Provide the capability to reprocess up to 10 percent of the wideband data on a daily basis
- Retain raw wideband data for a minimum of 30 days from time of receipt
- Process received wideband data at an average aggregate rate of 12 Mbps (goal is to process at an average aggregate rate of 30 Mbps, which is 7.5Mbps per input string)
- Sustain operations 24 hours a day, 7 days a week for a minimum mission life of 5 years

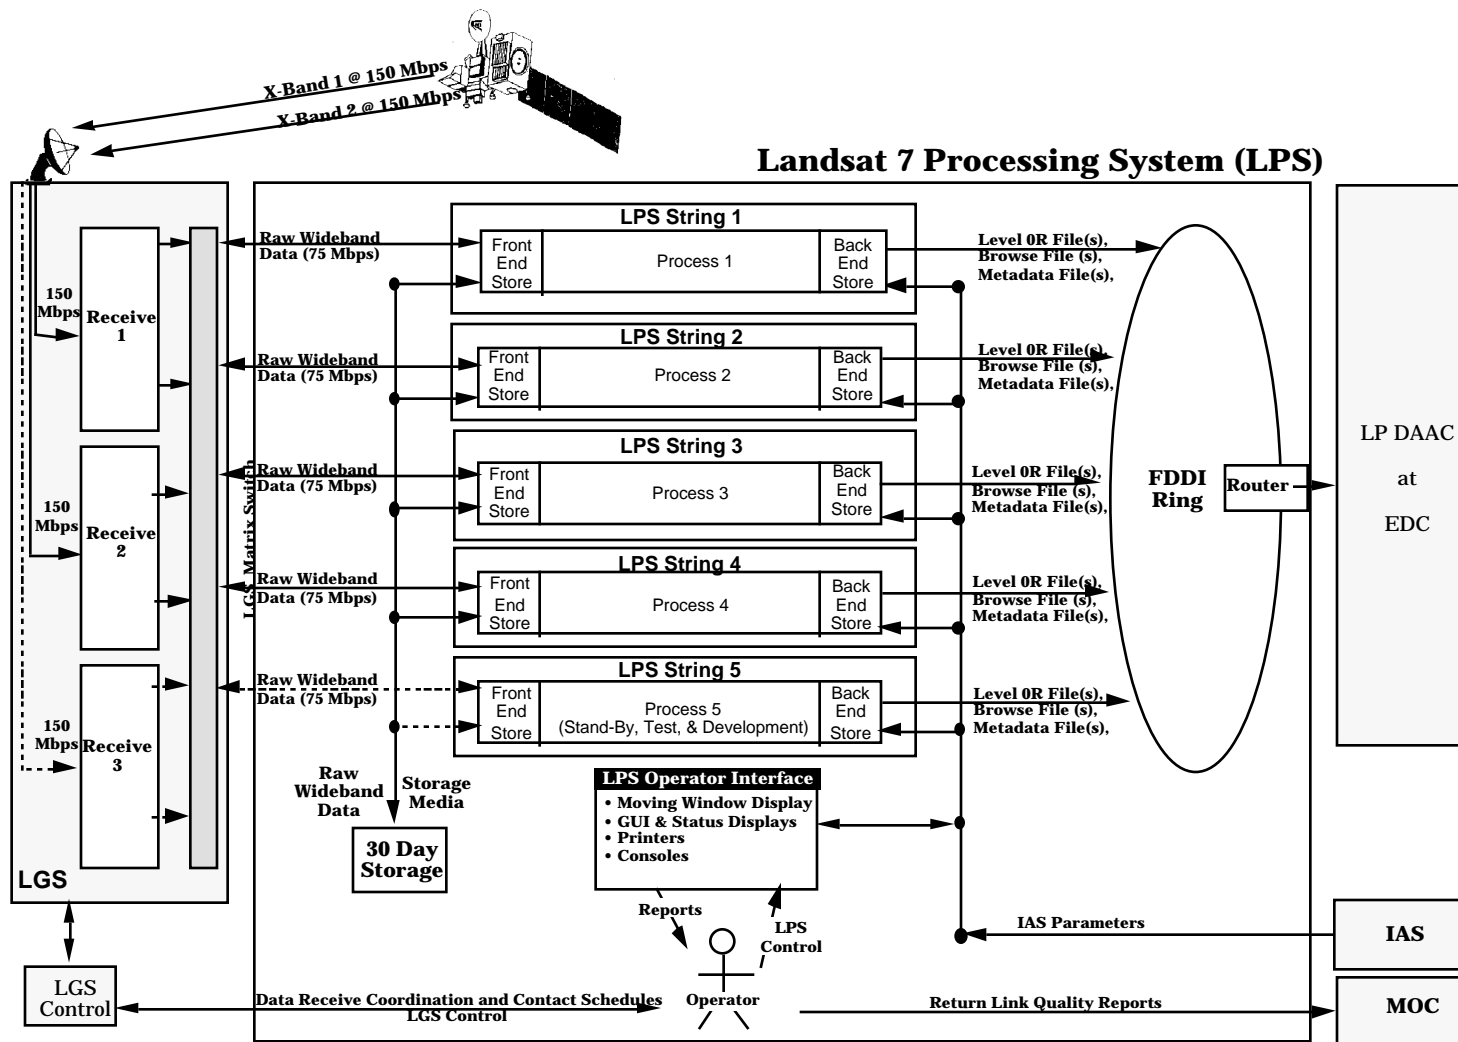

LPS Context Diagram

- **LGS**
 - » Coordinate with LGS to capture raw wideband data on contact basis
 - » Receive raw wideband data at 75 Mbps on four physical channels
- **MOC**
 - » Provide data receive summary report
 - » Provide non-nominal return link quality statistics
- **IAS**
 - » Receive Parameters for sensor alignment and scene identification
 - » Receive anomalous image quality statistics
- **LP DAAC**
 - » Notify LP DAAC of data availability
 - » Receive Data Delivery Notice from the LP DAAC

LPS Functional Block Diagram
